Geometrical Methods in Robotics

With 18 Figures

Springer 

Contents

Preface	vii
1 Introduction	1
1.1 Robots and Mechanisms	1
1.2 Algebraic Geometry	3
1.3 Differential Geometry	5
2 Lie Groups	9
2.1 Definitions and Examples	9
2.2 More Examples – Matrix Groups	12
2.3 Homomorphisms	16
2.4 Actions and Products	18
2.5 The Proper Euclidean Group	20
3 Subgroups	25
3.1 The Homomorphism Theorems	25
3.2 Quotients and Normal Subgroups	27
3.3 Group Actions Again	29
3.4 Matrix Normal Forms	30
3.5 Subgroups of $SE(3)$	34
3.6 Reuleaux’s Lower Pairs	36
3.7 Robot Kinematics	38
4 Lie Algebra	41
4.1 Tangent Vectors	41
4.2 The Adjoint Representation	43
4.3 Commutators	45
4.4 The Exponential Mapping	49
4.5 Robot Jacobians	52
4.6 Subalgebras, Homomorphisms and Ideals	54
4.7 The Killing Form	57
4.8 The Campbell–Baker–Hausdorff Formula	58
5 A Little Kinematics	61
5.1 Inverse Kinematics for 3-R Wrists	61
5.2 Inverse Kinematics for 3-R Robots	64
5.3 Kinematics of Planar Motion	68
5.4 The Planar 4-Bar	77

6	Line Geometry	81
6.1	Lines in Three Dimensions	81
6.2	Plücker Coordinates	83
6.3	The Klein Quadric	85
6.4	The Action of the Euclidean Group	86
6.5	Ruled Surfaces – The Regulus	90
6.6	The Cylindroid	93
6.7	Line Complexes	95
6.8	Grassmannians	98
7	Representation Theory	101
7.1	Definitions	101
7.2	Combining Representations	103
7.3	Representations of $SO(3)$	108
7.4	$SO(3)$ Plethysm	111
7.5	Representations of $SE(3)$	113
7.6	The Principle of Transference	118
8	Screw Systems	123
8.1	Generalities	123
8.2	2-systems	126
8.3	3-systems	133
8.4	Identification of Screw Systems	140
8.5	Operations on Screw Systems	147
9	Clifford Algebra	149
9.1	Geometric Algebra	149
9.2	Clifford Algebra for the Euclidean Group	156
9.3	Clifford’s Biquaternions	159
9.4	Geometry of Ruled Surfaces	164
10	The Study Quadric	171
10.1	Study’s Soma	171
10.2	Linear Subspaces	174
10.3	Partial Flags and Projections	179
10.4	Intersection Theory	183
11	Statics	193
11.1	Co-Screws	193
11.2	Forces, Torques and Wrenches	194
11.3	Wrist Force Sensor	196
11.4	Wrench at the End-Effector	197
11.5	Gripping	200
11.6	Friction	205

12 Dynamics	209
12.1 Momentum and Inertia	209
12.2 Robot Equations of Motion	213
12.3 Recursive Formulation	218
12.4 Lagrangian Dynamics of Robots	221
12.5 Decoupling by Design	226
12.6 Hamiltonian Dynamics of Robots	228
13 Differential Geometry	233
13.1 Metrics, Connections and Geodesics	233
13.2 Mobility of Overconstrained Mechanisms	238
13.3 Controlling Robots Along Helical Trajectories	243
13.4 Decoupling by Coordinate Transformation	246
Bibliography	251
Index	257
